Fascinating Facts!

Toothy

Alligators

Amazingly, alligators have between 74 and 80 teeth in their jaws.

Wow!

Never Stop Growing!

Both male and female alligators never, ever stop growing. Males average 8-10 feet long whilst females are slightly smaller. Older males can grow up to 15 feet long and weigh over 1000 pounds. That's heavy!

Did You Know?

American Alligators once faced extinction but were fortunately saved by the The United States Fish Wildlife Service. They are now thriving.

✦ The American Alligator ✦

As you take a stroll through the swampy marshes, have you ever been aware of the deadly American Alligator -latin name:mississippiensis. Well you should be because they are ferocious animals and they will eat anything in their way. Be warned, they still exist today!

How Do they look

Have you ever imagined what the american alligator looks like? if you havent i will tell you right here. American alligators have scaly skin and they are chubby too. and weigh about 1000 pounds looks weare 10 to 15 feet!!!

Home sweet swamp

American Alligators most common habitat is in freshwater rivers and marsh land in the southern United States, especially Florida. Wow, now this makes you think twice before going to these places!! Expert ally Crook once said, I believe that the American alligator will soon be extinct because of their homes being destroyed.

✦✦ Its Dinner time! ✦

American alligators are carnivores and they will eat anything in their sight: small Birds; little mammals; slippery snakes, and lots more. You better watch out for these creaches because they will eat you!!
